

Workflow Audit and Tool Setup (FL-01)

Name: Bhoompally Kalyan Reddy | Track: Machine Learning / AI Fluency

1. Workflow Audit Table

Below are 12 recurring tasks from my week (study, work, coding), classified by how I use AI to accomplish them.

Task	Classification	Rationale
1. Deciding on ML model architecture	Just me	AI doesn't know the exact business constraints or data limits.
2. Sett		

2. Three Target Tasks

These are the three tasks I will reuse and optimize in FL-02 through FL-04.

Target Task 1: Writing Python data analysis code

- What "Done Well" Means: The AI generates Python code that uses pandas or duckdb efficiently. The code runs without syntax errors, includes comments explaining the logic, and successfully handles missing data without introducing bias or data leakage.

Target Task 2: Summarizing lecture transcripts

- What "Done Well" Means: The AI processes a raw text transcript and outputs a concise bulleted list of the top 3-5 core concepts, explicitly highlighting any action items mentioned by the speaker. It must not hallucinate information.

Target Task 3: Drafting professional emails

- What "Done Well" Means: The AI writes a draft that is concise, polite, and gets straight to the point. It avoids overly flowery "AI language" and sounds like a natural, professional human being.
