

Consistency, Not Talent (Week 3)

Name: Bhoompally Kalyan Reddy | Track: Machine Learning / AI Fluency

1. One-Line Claim

"Machine Learning Intern building predictive models that solve real business problems without the buzzwords."

2. Content Map

Page Structure: Single-Page Portfolio

- **Section 1 (Hero):** One-line claim + simple text, no flashy background.
- **Section 2 (Main Work):** Case Study 1 - Predicting Content Decay (ML Capstone).
- **Section 3 (Secondary Work):** Case Study 2 - Search Intelligence Data Contract.
- **Section 4 (About):** Short Bio.
- **Section 5 (Call to Action):** Connect on LinkedIn.

Still need to gather:

- A clean, high-res screenshot of the DuckDB terminal output and accuracy metrics.
- A public link to my GitHub repository containing the final Jupyter notebook.

3. Identity Kit

Fonts: Inter. (Using one font in two weights: Bold & Regular for a quiet, technical look).

Palette:

- Main Background: #FAFAFA (Warm White)
- Main Text: #171717 (Near Black)
- Accent/Link Color: #0070F3 (Electric Blue - used sparingly)

Logo/Favicon: A simple text bracket [BK] in near-black.

Style Note: "Keep it quiet and technical. The work should be the loudest thing on the page. Use generous whitespace, Inter font, and only use Electric Blue (#0070F3) for actionable links or key metrics."

4. Image Curation & Rejection Note

Accepted Image: A clean, cropped real screenshot of my Jupyter Notebook showing the GroupShuffleSplit code and the final 74% accuracy classification report.

Rejected Image (AI Generated): I asked AI to generate an image representing "machine learning data analysis." It generated a glowing, fake-glass brain with binary code matrix text falling in the background.

Rejection Reason: "It looks like generic AI slop. It competes with my actual work for attention and makes the portfolio look less trustworthy. A real screenshot of my code proves my competence much better than a fake glowing brain."
